List of Figures.....	v
List of Tables	ix
Acknowledgements	xi
Chapter 1 Introduction	1
1.1 Overview	1
1.2 Chronological and geographical setting	1
1.3 Research Questions	2
1.4 Aims and Objectives	2
1.5 Choice of Data and Methodology	2
1.6 Book Outline	3
Chapter 2 Theoretical Approaches to Landscape, Political Geography and Trade.....	4
2.1 Introduction	4
2.2 Defining an archaeological landscape	4
2.3 Cities, States and City-States.....	5
2.3.1 Definition and Origin	5
2.4 Structural characteristics of pre-industrial complex economies.....	8
2.4.1 Theoretical frameworks	8
2.4.2 Property and Land Management	10
2.4.3 Craft production	11
2.5 Economic policy and interregional interaction.....	12
2.6 Summary.....	14
Chapter 3 Upper Mesopotamia and Central Anatolia in the Old Assyrian Colony Period. A Review of the Documentary Historical Evidence	15
3.1 Introduction	15
3.2 The Old Assyrian Period: Chronology	15
3.2.1 Assyria during the first centuries of the 2nd millennium BC.	16
3.3 A tale from two cities: Aššur and Kaneš.....	17
3.3.1 The origins of Aššur and its urban organization.....	17
3.3.1.1 The City Hall of Aššur	19
3.3.1.2 The city of Kaneš	19
3.3.2.1 The kārum of Kaneš	22
3.4 Political Geography in Middle Bronze Age Mesopotamia and Central Anatolia	22
3.4.1 The Middle Bronze Age I	22
3.4.2 The Middle Bronze Age II.....	23
3.5 The History and Organization of the Old Assyrian Trade System	24
3.5.1 Origin and definition	24
3.5.2 The structure of the trade.....	25
3.5.3. Geographical reconstruction of trade.....	28
3.5.4 Goods and production.....	30
3.5.5 Logistics and trade routes	32
3.6 Summary.....	32
Chapter 4 Perspectives on Material Culture: Intra and Inter-Regional Dynamics	33
4.1 Introduction	33
4.1.1 Research Questions	34
4.1.2 Methodology	34
4.2 Syrian Bottles	35
4.2.1 General characteristics and definition of shapes.....	35
4.2.2 Limits of the dataset.....	35
4.2.3 Diachronic and spatial distribution.....	36
4.2.4 Intra-site contexts.....	38
4.2.5 Discussion	39

4.3. Khabur Ware.....	39
4.3.1 General characteristics of Khabur Ware.....	39
4.3.1.1 Origins.....	39
4.3.1.2 Classification and vessels shapes description.....	40
4.3.1.3 Decoration.....	41
4.3.1.4 Periodization.....	42
4.3.2 The dataset and its limits.....	43
4.3.3 Diachronic and spatial distribution.....	46
4.3.4 Intra-site contexts.....	46
4.3.5 Quantitative analysis: shapes, contexts and distribution areas.....	48
4.3.6 Discussion.....	50
4.4 Scales and weighing systems.....	52
4.4.1 General characteristics of balance weights.....	52
4.4.2 The dataset and its limits.....	55
4.4.3 Diachronic and spatial distribution of different weight systems.....	55
4.4.4 Intra-site contexts.....	56
4.4.5 Quantitative analysis: materials, shapes, contexts and weight systems.....	58
4.4.6 Discussion.....	68
4.5 Seals and sealing.....	69
4.5.1 General characteristics of sealing technology and regional styles.....	69
4.5.2 The dataset and its limits.....	71
4.5.3 Diachronic and spatial distribution of glyptic styles.....	72
4.5.4 Intra-site contexts.....	74
4.5.5 Quantitative analysis: materials, sealing practices, contexts and styles.....	75
4.5.6 Discussion.....	79
4.6 Summary.....	83
Chapter 5 Models of Settlement Hierarchy.....	84
5.1 Introduction.....	84
5.2 Natural and human landscapes.....	85
5.2.1 Case studies.....	85
5.2.1.1 The Khabur Triangle.....	85
5.2.1.2 Central Anatolia.....	87
5.2.2 The properties and limitations of archaeological survey data.....	90
5.3 Settlement Rank-Size Distributions.....	96
5.3.1 Methodology.....	96
5.3.2 Results.....	99
5.3.2.1 The Khabur Triangle versus central Anatolia.....	99
5.3.2.2 The Khabur Triangle.....	100
5.3.2.3 Central Anatolia.....	104
5.3.3 Discussion.....	105
5.4 Spatial Interaction Models.....	106
5.4.1 Methodology.....	107
5.4.2 Model Structure.....	107
5.4.3 Results.....	109
5.4.3.1 Scenario 1: The Benefit of Geographic Location.....	109
5.4.3.2 Scenario 2: Reproducing Settlement Hierarchies.....	112
5.4.4. Discussion.....	113
5.5 Summary.....	117
Chapter 6 Landscape-scale Models of Movement and Interaction.....	119
6.1 Introduction.....	119
6.2 Natural and Human-Modified Landscapes of Movement.....	120
6.2.1 Case studies.....	120
6.2.2 Geographical features and landscape constraints to movement.....	120
6.2.3 Archaeological features.....	121
6.2.3.1 Hollow ways in Upper Mesopotamia.....	121
6.2.4 Textual evidence and inter-regional trade routes.....	124
6.3 Computational methods.....	126

6.3.1 Least Cost Surfaces, Paths and Corridors.....	126
6.3.2 Electric Circuit Theory	128
6.3.3 Network Analysis.....	129
6.3.4 Spatial Interaction Model and Areas of Interaction	130
6.4 Connectivity and Interaction at the Regional Scale.....	130
6.4.1 Network Centrality and Clustering	131
6.4.1.1 Hollow ways and connectivity in the Khabur Triangle	134
6.4.2 Landscape terrestrial connectivity.....	138
6.4.3 Discussion	138
6.5 Long-distance trade routes across Upper Mesopotamia and Anatolia.....	141
6.5.1 Discussion	145
6.6 Colonies and Connectivity in the Assyrian Commercial Landscape	145
6.6.1 Proximity to geographical features.....	145
6.6.2 Connectivity	146
6.6.3. Centrality	147
6.6.4 Discussion	149
6.7 Summary	152
Chapter 7 Discussion: Landscapes of Interaction in Upper Mesopotamia and Anatolia	153
7.1 Introduction	153
7.2 Defining political landscapes	153
7.3 Commercial landscapes of long-distance contacts	156
7.4 Bridging Upper Mesopotamia and Anatolia.....	159
Chapter 8 Conclusions	161
8.1 Final Remarks.....	161
8.2 Directions for Future Research.....	162
Bibliography	164

List of Figures

FIGURE 2.1. A SCHEMATIC, HIGHLY STYLISTED MODEL OF CITY-STATE.	8
FIGURE 2.2. A SCHEMATIC MODEL OF EARLY PRE-INDUSTRIAL ECONOMIES IN THE NEAR EAST.	11
FIGURE 3.1. SOUTH-EASTERN ANATOLIA AND UPPER MESOPOTAMIA IN THE EARLY SECOND MILLENNIUM BC.	17
FIGURE 3.2. SCHEMATIC PLAN OF AŠŠUR IN THE OLD ASSYRIAN PERIOD.	18
FIGURE 3.3. KÜLTEPE'S MAIN MOUND (HÖYÜK) AND LOWER TOWN.....	20
FIGURE 3.4. THE OLD PALACE (LEVEL 8) AND THE WARŠAMA'S PALACE (LEVEL 7) ON KÜLTEPE'S MAIN MOUND.	21
FIGURE 3.5. THE NEAR EAST IN THE 18TH CENTURY BC.	24
FIGURE 3.6. DISTRIBUTION OF OLD ASSYRIAN COMMERCIAL SETTLEMENTS DURING KÜLTEPE'S LOWER TOWN LEVEL II (C. 1970-1835 BC).	27
FIGURE 3.7. DISTRIBUTION OF OLD ASSYRIAN COMMERCIAL SETTLEMENTS DURING KÜLTEPE'S LOWER TOWN LEVEL IB (C. 1835-1700 BC).....	28
FIGURE 3.8. OLD ASSYRIAN TRADE SCHEMATIC MODEL.....	31
FIGURE 4.1. ALABASTRON TYPE SYRIAN BOTTLES FROM ESKIYAPAR (1; ÖZGÜÇ 1986: FIGURE 3:9), KÜLTEPE (2; ÖZGÜÇ 1986: FIGURE 3.3), TELL BI'A (3; STROMMINGER AND KOHLMAYER 1998: PLATE 177), AND TELL BRAK (4; OATES ET AL. 2001: FIGURE 190). DRAWING BY AUTHOR.	35
FIGURE 4.2. DIFFERENT TYPOLOGIES OF SYRIAN BOTTLES: OVOID-EGG SHAPE (1A-C), GLOBULAR SHAPE (2A-B), CYLINDRICAL SHAPE (3A-B), AND PIRIFORM SHAPE (4A). FROM KÜLTEPE LEVEL IA (1a, 1b, 2a, 3a; EMRE 1999: PLATE I: 1-4), KÜLTEPE LEVEL IB (4a; EMRE 1999: PLATE II:2), TELL MARDIKH (1C; NIGRO 2002: FIGURE 92), TELL ATCHANA LEVEL VII (2B; YENER 2010: 218), AND TELL HARIRI (3B; LEBEAU 1983: FIGURE 7.4). DRAWING BY AUTHOR.	35
FIGURE 4.3. DISTRIBUTION OF SYRIAN BOTTLES IN THE THIRD MILLENNIUM BC.	36
FIGURE 4.4. DISTRIBUTION OF SYRIAN BOTTLES IN THE EARLY SECOND MILLENNIUM BC (CA. 2000-1700 BC).	37
FIGURE 4.5. SYRIAN BOTTLES FROM ALALAKH'S PALACE, LEVEL VII (A-B; HEINZ 1992: PLATE 12: 49, 47). PLAN REDRAWN AFTER WOOLLEY 1953: FIGURE 12, WITH SOME MODIFICATIONS.	38
FIGURE 4.6. Khabur Ware (Phase I): JARS (1-6), BOWLS (7-9). FROM TELL AL RIMAH (1, 5, 8; OATES 1970: PLATE IX: 2, 1, 3), TELL JIGAN (2; OGUCHI 1997: PLATE II-2: 8), TELL MOZAN (3; BUCCELLATI AND KELLY-BUCCELLATI 1988: FIGURE 26: M1 83), TELL TAYA (4, 7, 9; READE 1968: PLATE LXXXVII: 27, 28, 26), AND CHAGAR BAZAR (6; MALLOWAN 1936: FIGURE 16: 3). REDRAWN AND MODIFIED BY AUTHOR.	40
FIGURE 4.7. Khabur Ware JARS (Phase II): WIDE MOUTHED (1-2), SHORT/LONG NECKED (3-5), GLOBULAR (6-7). FROM TELL THUWAIJ (1; FUJI ET AL. 1989-1990: FIGURE 7: 12), TELL FISNA (2; NUMOTO 1988: FIGURE 25: 225), CHAGAR BAZAR (5, 6; MALLOWAN 1937: FIGURE 21: 12, FIGURE 22: 14), TELL MOHAMMED DIYAB (3, 7; FAIVRE 1992: FIGURE 10: 2, 7), AND TELL BILLA (4; SPEISER 1933: PLATE LIX: 4). REDRAWN AND MODIFIED BY AUTHOR.	40
FIGURE 4.8. Khabur Ware (Phase II): BOWLS (1-3), CUPS/BEAKERS (4-7), AND GRAIN MEASURES/KRATERS (8-10). FROM TELL JIGAN (1; OGUCHI 1997 A: PLATE II-16: 8); TELL THUWAIJ (3; FUJI ET AL. 1989-1990: FIGURE 7: 14), KÜLTEPE (6-7; ÖZGÜÇ 1953: FIGURES 25 AND 26); TELL LEILAN (4; WEISS 1985: 13), TELL AL RIMAH (8; POSTGATE ET AL. 1997: FIGURE 870), AND TELL BRAK (2, 5, 9-10; OATES ET AL. 1997: FIGURE 190: 241, FIGURE 195: 350, FIGURE 191: 259,265). REDRAWN AND MODIFIED BY AUTHOR.	41
FIGURE 4.9. Khabur Ware Painted Decorations (Redrawn and Modified from Faivre and Nicolle 2007: Plate XVI).	41
FIGURE 4.10. DISTRUBUTION OF Khabur Ware Period I (C. 2000-1800 BC).....	46
FIGURE 4.11. DISTRIBUTION OF Khabur Ware Period II (C. 1800-1750/30 BC).....	47
FIGURE 4.12. THE FREQUENCY DISTRIBUTION OF Khabur Ware (Phase I-II, C. 2000-1750/1730 BC).....	47
FIGURE 4.13. FREQUENCY OF VESSEL SHAPES IN THE MAIN AND SECONDARY DISTRIBUTION ZONES.	48
FIGURE 4.14. FREQUENCY OF VESSELS BY CONTEXT IN THE MAIN AND SECONDARY DISTRIBUTION ZONES.	49
FIGURE 4.15. FREQUENCY AND PERCENTAGE OF VESSEL SHAPES IN EACH CONTEXT.	49
FIGURE 4.16. PRESUMED EXTENT OF ŠAMŠI-ADAD I'S KINGDOM.	52

FIGURE 4.17. TYPOLOGIES OF BALANCE WEIGHTS IN THE ANCIENT NEAR EAST: SPHENDONOID (1-8), DISC-SHAPED (9), SPHERICAL (10-11), CYLINDRICAL (15), DOME-SHAPED (12, 13), ROMBOIDAL (14), AND ZOOMORPHIC (16-18). FROM KÜLTEPE (1, 3, 6-7, 9, 14; ÖZGÜÇ 1986: PLATE 131: 20, 41, 23, 25, PLATE 130: 4), BÖĞAZKÖY (2, 4-5, 8; BOEHMER 1972: PLATE LXXXIV: 2196, 2199, 2200, 2198), TELL MARDIKH (10-13, 15, 17; ASCALONE AND PEYRONEL 2006B: PLATE LVII: 189, PLATE XLVII: 153, PLATE LX: 196-197, PLATE LXI: 201, PLATE LXVIII: 240), TELL HARIRI (16; PARROT 1953: FIGURE 63), AND TELL ATCHANA (18; MAZZONI 1980: FIGURE 28A). REDRAWN BY AUTHOR.	54
FIGURE 4.18. SPATIAL DISTRIBUTION OF DEPOSITS OF HEMATITE AND SITES YIELDING BALANCE WEIGHTS IN HEMATITE DURING THE MIDDLE BRONZE AGE (C. 2000-1600 BC).....	54
FIGURE 4.19. SPATIAL DISTRIBUTION OF WEIGHT SYSTEMS DURING THE MIDDLE BRONZE AGE (C. 2000-1700 BC).	56
FIGURE 4.20. FREQUENCY AND PERCENTAGE OF BALANCE WEIGHTS ACCORDING TO THE CONTEXT AT TELL MARDIKH (EBLA).....	61
FIGURE 4.21. FREQUENCY OF DIFFERENT WEIGHT SYSTEMS ACCORDING TO THE CONTEXT AT TELL MARDIKH (EBLA).....	61
FIGURE 4.22. PERCENTAGES OF DIFFERENT WEIGHT SYSTEMS ACCORDING TO THE DISTRIBUTION ZONES.....	62
FIGURE 4.23. BOX AND WHISKER PLOT OF MASS (GRAMS) OF STANDARD UNIT (ONE SHEKEL) ACCORDING TO THE WEIGHT SYSTEM.....	63
FIGURE 4.24. CUMULATIVE PERCENTAGE OF BALANCE WEIGHTS BY RATIO.	64
FIGURE 4.25. KENDALL STATISTICS GRAPH OF 37 ANATOLIAN WEIGHTS.....	65
FIGURE 4.26. KENDALL STATISTICS GRAPH OF 53 LEVANTINE WEIGHTS.....	65
FIGURE 4.27. KENDALL STATISTICS GRAPH OF 125 MESOPOTAMIAN WEIGHTS.	66
FIGURE 4.28. KENDALL STATISTICS GRAPH OF 93 SYRIAN WEIGHTS.....	66
FIGURE 4.29. KENDALL STATISTICS GRAPH OF 55 AEGEAN WEIGHTS.....	67
FIGURE 4.30. KENDALL STATISTICS GRAPH OF 277 WEIGHTS.	67
FIGURE 4.31. DISTRIBUTION OF CYLINDER AND STAMP SEALS IN UPPER MESOPOTAMIA AND CENTRAL/SOUTH-EASTERN ANATOLIA DURING THE MIDDLE BRONZE AGE (C. 2000 – 1600 BC).....	70
FIGURE 4.32. DISTRIBUTION OF GLYPHIC REGIONAL STYLES IN IN UPPER MESOPOTAMIA AND CENTRAL/SOUTH-EASTERN ANATOLIA DURING THE MIDDLE BRONZE AGE (C. 2000 – 1600 BC).....	75
FIGURE 4.33. FREQUENCY AND PERCENTAGE OF KINDS OF OBJECTS BEARING SEAL IMPRESSIONS IN THE MIDDLE BRONZE AGE I AND II.	78
FIGURE 4.34. FREQUENCY OF DIFFERENT REGIONAL STYLES ACCORDING TO THE CONTEXT AND THE DISTRIBUTION AREA. ...	80
FIGURE 4.35. PERCENTAGES OF DIFFERENT REGIONAL STYLES ACCORDING TO THE HOUSE.	81
FIGURE 4.36. PERCENTAGES OF DIFFERENT SEALS/IMPRESSIONS STYLES ACCORDING TO THE DISTRIBUTION ZONES.	82
FIGURE 5.1. MAP SHOWING THE TWO CASE STUDIES: KHABUR TRIANGLE (A) AND CENTRAL ANATOLIA (B).	86
FIGURE 5.2. RAINFALL IN THE KHABUR TRIANGLE.....	86
FIGURE 5.3. MAP SHOWING ARCHAEOLOGICAL SURVEYS CARRIED OUT IN THE KHABUR TRIANGLE.....	87
FIGURE 5.4. SPATIAL DISTRIBUTION AND ESTIMATED SIZES OF MIDDLE BRONZE AGE SITES IN THE KHABUR TRIANGLE.....	88
FIGURE 5.5. MAP SHOWING ARCHAEOLOGICAL SURVEYS CARRIED OUT IN CENTRAL ANATOLIA.....	88
FIGURE 5.6. SPATIAL DISTRIBUTION AND ESTIMATED SIZES OF MIDDLE BRONZE AGE SITES IN CENTRAL ANATOLIA.	90
FIGURE 5.7. LINEAR REGRESSION MODEL OF SITES DENSITY VS. ARCHAEOLOGICAL SURVEY AREA.	92
FIGURE 5.8. RECOVERY RATES FOR ARCHAEOLOGICAL SURVEYS CARRIED OUT IN THE KHABUR TRIANGLE AND IN CENTRAL ANATOLIA. THE TRIANGLE MARKERS INDICATE THE KHABUR TRIANGLE'S SURVEYS.	93
FIGURE 5.9. DIFFERENT EXAMPLES OF RANK-SIZE CURVES.	96
FIGURE 5.10. AREAS IN A RANK-SIZE GRAPH USED AS POSITIVE AND NEGATIVE COMPONENTS OF THE COEFFICIENT A.	97
FIGURE 5.11. A-COEFFICIENT FOR LOG-NORMAL (ZIPF'S LAW) (A), CONVEX (B), AND PRIMATE (C) DISTRIBUTIONS. THE LEFT COLUMN SHOWS THE STANDARDISED RANK-SIZE PLOT, THE RIGHT COLUMN SHOWS THE LOCATION OF POSSIBLE SETTLEMENTS WITH SYMBOLS PROPORTIONAL TO THEIR SIZES.	98
FIGURE 5.12. BOX AND WHISKER PLOT OF SIZE (IN HECTARES) OF MIDDLE BRONZE AGE SETTLEMENTS IN THE KHABUR TRIANGLE AND IN CENTRAL ANATOLIA.....	99
FIGURE 5.13. SITE SIZE HIERARCHIES, USING A NATURAL LOGARITHMIC SCALE FOR SIZE OF SETTLEMENTS (HA) AND RANK (ORDINAL), IN THE KHABUR TRIANGLE AND CENTRAL ANATOLIA.	100

FIGURE 5.14. RANK-SIZE GRAPH AND HISTOGRAM OF 1000 BOOTSTRAPPED A-COEFFICIENT VALUES OF THE KHABUR TRIANGLE DATASET. THE HISTOGRAMS SHOW THE DISTRIBUTION OF THE SIMULATED A-COEFFICIENT, ALONG WITH THE OBSERVED ONE (RED LINE).	101
FIGURE 5.15. RANK-SIZE GRAPH AND HISTOGRAM OF 1000 BOOTSTRAPPED A-COEFFICIENT VALUES OF THE KHABUR TRIANGLE DATASET. THE HISTOGRAMS SHOW THE DISTRIBUTION OF THE SIMULATED A-COEFFICIENT, ALONG WITH THE OBSERVED ONE (RED LINE).	102
FIGURE 5.16. SITE SIZE HIERARCHIES, USING A NATURAL LOGARITHMIC SCALE FOR SIZE OF SETTLEMENTS (HA) AND RANK (ORDINAL), IN THE WEST AND EAST KHABUR TRIANGLE.	103
FIGURE 5.17. SPATIAL DISTRIBUTION OF RANK-SIZE PATTERNS IN THE KHABUR TRIANGLE AND IN CENTRAL ANATOLIA.	106
FIGURE 5.18. THE VARIABLES OF A SPATIAL INTERACTION MODEL.	108
FIGURE 5.19. HEAT MAP SHOWING PEARSON R ² 'S CORRELATION IN CENTRAL ANATOLIA (A) AND IN THE KHABUR TRIANGLE (B) UNDER DIFFERENT A AND B CONDITIONS. THE GREYSCALE VALUES REPRESENT CORRELATION VALUES, WITH DARK GREY REPRESENTING THE BEST FIT AND LIGHT GREY THE WORST.	110
FIGURE 5.20. MAPPED OUTPUT FROM SCENARIO 1 FOR CENTRAL ANATOLIA (A) AND THE KHABUR TRIANGLE (B), WITH PARAMETER SETTINGS AS INDICATED IN THE TABLE 5.8. BLUE INDICATES LARGER RELATIVE SITE SIZE UNDER THE MODEL.	111
FIGURE 5.21. HEAT MAP SHOWING PEARSON AND SPEARMAN'S CORRELATIONS AVERAGED IN CENTRAL ANATOLIA (A) AND IN THE KHABUR TRIANGLE (B) UNDER DIFFERENT A AND B CONDITIONS. THE GREYSCALE VALUES REPRESENT CORRELATION VALUES, WITH DARK GREY REPRESENTING THE BEST FIT AND LIGHT GREY THE WORST.	112
FIGURE 5.22. COMPARISON OF SITE SIZE HIERARCHIES ON NORMALISED LOGARITHMIC SCALE (USING POPULATION AND ESTIMATED SIZE) BETWEEN THE MODELLED AND THE OBSERVED DATA IN CENTRAL ANATOLIA.	114
FIGURE 5.23. COMPARISON OF SITE SIZE HIERARCHIES ON NORMALISED LOGARITHMIC SCALE (USING POPULATION AND ESTIMATED SIZE) BETWEEN THE MODELLED AND THE OBSERVED DATA IN THE KHABUR TRIANGLE.	114
FIGURE 5.24. MAPPED OUTPUT FROM SCENARIO 1 FOR CENTRAL ANATOLIA (A) AND THE KHABUR TRIANGLE (B), WITH PARAMETER SETTINGS AS INDICATED IN THE TABLE 5.9. BLUE INDICATES LARGER RELATIVE SITE SIZE UNDER THE MODEL.	116
FIGURE 6.1. LOCATIONS OF BRIDGES, FORDS, FERRIES AND CROSSINGS IN ANATOLIA DURING THE OLD ASSYRIAN PERIOD (SOURCE: BARJAMOVIC 2011A: TABLE 2).	122
FIGURE 6.2. LOCATIONS OF INNS IN ANATOLIA DURING THE OLD ASSYRIAN PERIOD (SOURCE: BARJAMOVIC 2011A: TABLE 5).	122
FIGURE 6.3. FLOODED HOLLOW WAYS TO THE NORTH OF TELL BRAK AFTER HEAVY PRECIPITATIONS. (PICTURE TAKEN BY THE AUTHOR ON THE 1ST OF MAY 2011).	123
FIGURE 6.4. NETWORK OF HOLLOW WAYS IN THE KHABUR TRIANGLE (SOURCE: UR 2010B).	124
FIGURE 6.5. SCHEMATIC PLAN OF SETTLEMENT, ROADWAYS, AND LAND-USE ZONES AT TELL BRAK.	124
FIGURE 6.6. TRADE ROUTES IN THE OLD ASSYRIAN PERIOD.	125
FIGURE 6.7. ILLUSTRATION OF THE PROCEDURE FOR GENERATING A CMTC GRID. A - B: CUMULATIVE COST SURFACES FROM POINT A (LEFT) AND POINT B (RIGHT). LIGHTER SHADES INDICATE LOWER CUMULATIVE MOVEMENT COST. C: CORRIDOR CREATED BY ADDING THE TWO GRIDS A AND B. THE DARKER SHADES INDICATE THE OPTIMUM CORRIDOR.	127
FIGURE 6.8. EXAMPLE OF LEAST-COST PATH GENERATED FROM AN ACCUMULATED COST SURFACE MAP.	127
FIGURE 6.9. REPRESENTATION (BLACK PIXELS) OF LINEAR TERRAIN FEATURES (E.G. RIVERS, DEFENSIVE WALLS, TERRITORIAL BOUNDARIES, ETC.) IN A RASTER FRICTION SURFACE.	127
FIGURE 6.10. AN EXAMPLE OF LANDSCAPE REPRESENTED AS BOTH A GRID AND A CIRCUIT. THE LANDSCAPE CONTAINS PATCHES OF 0-RESISTANCE CELLS (OPEN), DISPERSAL HABITAT OF FINITE RESISTANCE (GREY), AND ONE 'BARRIER' CELL WITH INFINITE RESISTANCE (BLACK). CELLS WITH FINITE RESISTANCE ARE REPLACED WITH NODES (SMALL DOTS), AND ADJACENT NODES ARE CONNECTED BY RESISTORS (MODIFIED FROM MCRAE ET AL. 2008).	128
FIGURE 6.11. EXAMPLES OF DIRECTED (A) AND UNDIRECTED (B) NETWORK.	129
FIGURE 6.12. EXAMPLES OF DEGREE, CLOSENESS AND BETWEENNESS CENTRALITY FOR THREE UNDIRECTED NETWORK STRUCTURES. NODES SIZE/COLOUR AND LABELS INDICATE CENTRALITY VALUES.	130
FIGURE 6.13. EXAMPLE OF HIERARCHICAL DIRECTED NYSTUEN-DACEY (N-D) NETWORK. THE NODE A IS THE BIGGEST ONE IN THE NETWORK AND, THEREFORE, IT RECEIVES FLOW FROM ALL SURROUNDING NODES. ON THE CONTRARY, THE NODE E IS THE SMALLEST ONE AND ARCS FROM IT DEPART TOWARDS ALL OTHER NODES.	130
FIGURE 6.14. NYSTUEN-DACEY NETWORK'S CENTRALITY RESULTS FOR CENTRAL ANATOLIA (+1 STANDARD DEVIATION): A) INDEGREE; B) CLOSENESS CENTRALITY; C) BETWEENNESS CENTRALITY; D) MARKOV CLUSTER. THE LINES ARE COLOURED ACCORDING TO THE FLOW, RANGING FROM LIGHT TO DARK RED.	132

FIGURE 6.15. NYSTUEN-DACEY NETWORK'S CENTRALITY RESULTS FOR THE KHABUR TRIANGLE (+1 STANDARD DEVIATION): A) INDEGREE; B) CLOSENESS CENTRALITY; C) BETWEENNESS CENTRALITY; D) MARKOV CLUSTER. THE LINES ARE COLOURED ACCORDING TO THE FLOW, RANGING FROM LIGHT TO DARK RED.	133
FIGURE 6.16. NYSTUEN-DACEY NETWORK'S CENTRALITY RESULTS FOR CENTRAL ANATOLIA (+2 STANDARD DEVIATION): A) INDEGREE; B) CLOSENESS CENTRALITY; C) BETWEENNESS CENTRALITY; D) MARKOV CLUSTER. THE LINES ARE COLOURED ACCORDING TO THE FLOW, RANGING FROM LIGHT TO DARK RED.	135
FIGURE 6.17. NYSTUEN-DACEY NETWORK'S CENTRALITY RESULTS FOR THE KHABUR TRIANGLE (+2 STANDARD DEVIATION): A) INDEGREE; B) CLOSENESS CENTRALITY; C) BETWEENNESS CENTRALITY; D) MARKOV CLUSTER. THE LINES ARE COLOURED ACCORDING TO THE FLOW, RANGING FROM LIGHT TO DARK RED.	136
FIGURE 6.18. SPATIAL DISTRIBUTION OF HOLLOW WAYS IN THE KHABUR TRIANGLE. IN RED, A) THE HOLLOW WAYS LIKELY FORMED DURING THE MIDDLE BRONZE AGE (C. 2000 – 1600 BC). HOLLOW WAYS NETWORK'S CENTRALITY RESULTS: B) INDEGREE; C) CLOSENESS CENTRALITY; D) BETWEENNESS CENTRALITY.	137
FIGURE 6.19. CIRCUITSCAPE CALCULATES CURRENT DENSITY BY CONDUCTING CURRENT THROUGH A RESISTANCE SURFACE (FRICTION MAP). STRAIGHT PARALLEL REGIONS ALLOW CURRENT TO FLOW THROUGH THE BEST PATHS FOR THE EAST-WEST DIRECTIONAL RUN (A AND C) AND FOR THE NORTH-SOUTH DIRECTIONAL RUN (B AND D).PANEL (E): OMNIDIRECTIONAL CONNECTIVITY MAP CALCULATED BY MULTIPLYING THE TWO GRIDS C AND D.	139
FIGURE 6.20. OMNIDIRECTIONAL CONNECTIVITY MAP FOR CENTRAL ANATOLIA.	140
FIGURE 6.21. OMNIDIRECTIONAL CONNECTIVITY MAP FOR THE KHABUR TRIANGLE.	140
FIGURE 6.22. LEAST-COST PATHS AND CORRIDORS BETWEEN AŠŠUR AND KANEŠ IN SCENARIO 1(A) AND 2(B). LIGHTER SHADES INDICATE LOWER CUMULATIVE MOVEMENT COST.	142
FIGURE 6.23. CURRENT MAP BETWEEN AŠŠUR AND KANEŠ IN SCENARIO 1(A) AND 2(B). HIGHER CURRENT DENSITIES (LIGHTER SHADES) INDICATE CELLS WITH HIGHER NET PASSAGE PROBABILITIES FOR RANDOM WALKERS.	143
FIGURE 6.24. MAP HIGHLIGHTING 'PINCH POINTS' OR CRITICAL HABITAT CONNECTIONS BETWEEN AŠŠUR AND KANEŠ IN SCENARIO 1(A) AND 2(B). HIGHER CURRENT DENSITIES (LIGHTER SHADES) INDICATE CELLS WITH HIGHER NET PASSAGE PROBABILITIES FOR RANDOM WALKERS.	144
FIGURE 6.25. OMNIDIRECTIONAL CONNECTIVITY MAP AND SPATIAL DISTRIBUTION OF OLD ASSYRIAN COLONIES.	146
FIGURE 6.26. LOCATIONS OF MOUNTAIN PASSES AND OLD ASSYRIAN COMMERCIAL SETTLEMENTS.	146
FIGURE 6.27. CUMULATIVE PATHWAY ANALYSIS TO SITE B FROM SITES A (1) AND C (2). WHERE THE TWO PATHS OVERLAP THE CORRESPONDING PIXELS ARE GIVEN A VALUE OF 2, SHOWN HERE AS A DARKER CELL (3).	147
FIGURE 6.28. CUMULATIVE LEAST COST PATHS (LCP) FOR EACH PAIR OF OLD ASSYRIAN COMMERCIAL SETTLEMENTS. DARKER VALUES (RED) INDICATE CELLS WITH THE HIGHEST NUMBER OF OVERLAPPING PATHS. BARJAMOVIC'S MODEL (A) VS. FORLANINI'S MODEL (B) FOR KÜLTEPE'S LOWER TOWN LEVEL II PERIOD (C. 1970-1835 BC).	148
FIGURE 6.29. CUMULATIVE LEAST COST PATHS (LCP) FOR EACH PAIR OF OLD ASSYRIAN COMMERCIAL SETTLEMENTS. DARKER VALUES (RED) INDICATE CELLS WITH THE HIGHEST NUMBER OF OVERLAPPING PATHS. BARJAMOVIC'S MODEL (A) VS. FORLANINI'S MODEL (B) FOR KÜLTEPE'S LOWER TOWN LEVEL IB PERIOD (C. 1835-1700 BC).	149
FIGURE 6.30. CURRENT FLOW BETWEENNESS CENTRALITY (CFBC) OF OLD ASSYRIAN COMMERCIAL SETTLEMENTS. BARJAMOVIC'S MODEL VS. FORLANINI'S MODEL FOR KÜLTEPE'S LOWER TOWN LEVEL II PERIOD (C. 1970-1835 BC).	150

Acknowledgements

This book is mostly based on my doctoral research and has benefited from the assistance and kindness of more people than I can list here. I would like to express my deep gratitude to my PhD supervisors Mark Altaweel and Andrew Bevan who have always been present during these years. This work would have never been done without their constant support and encouragement. I hope one day I can be as inspirational mentor as they were to me.

Gojko Barjamovic offered invaluable comments and feedbacks to which I am extremely grateful. Discussing details of this work with him was both an honour and source of great enjoyment.

I am also indebted to Roger Matthews, who was the first person I discussed the topic of my doctoral research with and to Cyprian Broodbank who gave me insightful suggestions and comments. I am particularly grateful to Mark Lake for his enlightening and revealing lectures as coordinator of the master course in GIS and Spatial Analysis in Archaeology at UCL.

I am extremely grateful to the members of the interdisciplinary project 'The Dawning of Empires in the Ancient Near East: A Dynamical Systems Approach' funded by UCL Grand Challenges small grants with whom I was lucky to collaborate: Karen Radner (UCL Department of Ancient History), and Alan Wilson, Hannah Fry and Toby Davies (UCL Centre of Advanced Spatial Analysis). Working with them was a great opportunity to improve my skills and widen my research interests.

I am also grateful to all the members of the Old Assyrian Text Project (OATP) and scholars dealing with the Old Assyrian period for their advice and collaboration: Adam Anderson, Jan Gerrit Dercksen, Yağmur Heffron, Thomas Hertel, Fikri Kulakoğlu, Mogens Trolle Larsen, Agnete Lassen, Cécile Michel, Nibal Muhesen, Xiaowen Shi, Edward Stratford, and Klaas Veenhof and Mark Weeden. They supported my ideas with constructive critiques and gave me the ground for developing new ones.

Thanks to Augusta McMahon who offered me the opportunity to excavate early second millennium levels at Tell Brak. Conversations with Carlo Colantoni, my co-excavator at Tell Brak, have also greatly influenced my conception of the second millennium in the Syrian Jazira.

I also thank David Schloen for involving me in the project 'Economic Analysis of Ancient Trade: The Case of the Old Assyrian Merchants of the Nineteenth Century BCE' at the University Chicago. This has been a great opportunity for collaborating with other scholars actively engaged in the study of the Old Assyrian trade system.

Finally many thanks to my friends both inside and outside the UCL Institute of Archaeology with whom I shared many nice moments during these years. I would like to thank past and present members of the AGIS lab (Christina Vona, Damon Ortega, Dario Guiduggi, Eva Jobbova, Fernando Sanchez-Trigueros, Giacomo Vinci, Guido Furlan, Xiuzhen Li, Nadia Mahmud, Smiti Nathan, Steve Markovsky, Stuart Eve, Valeria Boesso, Yu Fujimoto), friends in room 322b (Adi Keinan, Alice Hunt, Anke Marsh, Elizabeth Farebrother, Frederik Rademakers, Isabel Rivera-Collazo, Stuart Eve, Tessa Dickinson) and other offices of the institute (Andrea Squitieri, Carolyn Rando, Chiara Bonacchi, Francesco Iacono, Joseph Briffa, Micol Di Teodor, Massimiliano Pinarello, Peter Schauer, and Veysel Apaydin). Some friends and colleagues deserve a special mention for their active engagement with this work. I thank Enrico Crema and Eugenio Bortolini for several discussions on different theoretical and methodological approaches, and Michele Massa for endless conversations about Anatolian and Mesopotamian archaeology and for sharing data and ideas.

The UCL Institute of Archaeology offered an exceptional environment for pursuing my research, and I would like to thank all members of the administrative and academic staff

Finally, I would like to thank my parents for all their encouragement, love and support during these years.

Chapter 1

Introduction

1.1 Overview

This study focuses on central Anatolia and Upper Mesopotamia during the Old Assyrian Colony Period (c. 1970-1700 BC). It re-assesses Old Assyrian political and commercial landscapes via both the archaeological evidence itself and a further range of computational and spatial approaches. This period was characterised by a rapid increase in the social complexity of local groups and the further development of long-distance trade contacts, as witnessed by the spread of a wide range of objects and raw materials (e.g. stone, wood, and metals). In Anatolia and Mesopotamia in the early second millennium several different commercial systems co-existed with one another, but in fluid circuits cross-cut by the movement of merchants and envoys belonging to other trade networks and political entities (see Barjamovic 2011a: 8-9; Larsen 1987: 53). The political and economic landscapes of this period are thus patchy, and animated by different rival interests playing out at both local and inter-regional scales. This period also sees central Anatolia and Upper Mesopotamia tied more closely into the wider political world of Near Eastern Middle Bronze Age complex societies.

Despite the large number of archaeological surveys and excavations carried out across Upper Mesopotamia and central Anatolia, the wealth of archaeological finds, and the numerous parallels in material culture to be found between those two regions, a proper cross-cultural and regional study has rarely if ever been attempted in any detail. Furthermore, philological studies of early second millennium texts of Assyrian language from Kültepe, Alişar Höyük and Bogazköy, and the rigorous work of Larsen (1976) and Veenhof (1972) since the 1970s have exerted a decisive influence on Middle Bronze Age research in Anatolia. As a consequence, our understanding of this phenomenon has been largely text-based and, therefore, of limited analytical scope, both spatially and contextually. The general lack of analytic and synthetic studies of archaeological data aiming to detect interregional patterns across Anatolia and Mesopotamia could find several explanations. Until recently, one reason has been the limited interest of most Near Eastern archaeologists in creating broad explanatory models of archaeological processes. In fact, the work carried out by most scholars in this region has mainly focused on description, classification and comparison of finds, with particular attention to stylistic details, but typically short of clear analytical methods and/or new theoretical frameworks.

The situation has rapidly changed in the last ten years, and some attempts have been made to record and arrange relevant archaeological data into more appropriate theoretical frameworks. Particular categories of material culture such as Syrian bottles, Khabur ware, balance pan weights and seals have received growing attention with the suspicion that they might be useful tracers of the dynamics of long-distance contact (see Ascalone and Peyronel 2006b; Emre 1999; Oguchi 1997a, 1997b, and 1998; Otto 2000). This study seeks to go further and will combine this evidence via a joint material, computational and spatial approach in order to highlight some past misconceptions about the Old Assyrian trade network and explore its wider economic and political geography.

1.2 Chronological and geographical setting

This book frames the Old Assyrian trade network within a well-defined chronological and geographical setting. In particular, the Old Assyrian period is a chronological label used to define the earliest phase of textual evidence (and to a lesser extent material culture) associated with ancient Aššur and Assyria during the first centuries of the second millennium BC (Veenhof and Eidem 2008: 19). A more detailed discussion of chronology will follow in a subsequent chapter, but if we follow the so-called 'Middle Chronology', this is a period stretching from Erišum I's first year of reign in c. 1972 BC (Barjamovic *et al.* 2012: 26-28) and continuing down to c. 1700 BC. Nevertheless, Kültepe's lower town levels III and IV, although not much known or excavated, show that at the end of the third millennium perhaps a commercial quarter already existed (Aubet 2013: 309; Emre 1989; Kulakoğlu 2011a: 1020).

This study will place the inter-regional trade systems set up by the Assyrians within their wider political context in central Anatolia and Upper Mesopotamia during the Old Assyrian colony period. Such a perspective offers a better understanding of the social and political dynamics affecting the long-distance contacts between the early-complex societies present in my study area. In the early second millennium BC, the plains of northern Mesopotamia and the intermountain valleys of central Anatolia saw the emergence of a political landscape shifting from a peer-polity system of smaller city-states in its early stage (c. 2000 – 1800 BC) to a few larger territorial states in its later stage (c. 1800 – 1600 BC, e.g. Šamši-Adad I's kingdom in Upper Mesopotamia and Anitta's kingdom in central Anatolia). In the present book, I will refer to central Anatolia as the

area confined between the Pontic Mountains to the north and the Taurus mountains to the south, while Upper Mesopotamia is the land between the Tigris and Euphrates Rivers above where these rivers enter the southern Iraqi alluvial basin. Today those two regions fall in parts of three nations: northern Syria, northern Iraq, and central/south-eastern Turkey.

1.3 Research Questions

Via a combination of archaeological, textual and computational approaches, this work will be able to offer a more complete and clear understanding of the Old Assyrian trade network in Upper Mesopotamia and Central Anatolia in the early 2nd millennium BC. The chapters that follow will therefore deploy a broad range of tools and evidence to discern the scale, modality and diachronic development of the political and economic systems in the northern Mesopotamian and east-central Anatolian region and, more precisely, to answer the following research questions:

- What political, economic and/or social factors favoured the spread of specific examples of material culture during this period, such as Khabur ware, so-called Syrian bottles, pan balance weights and seals?
- To what extent and by what textual and non-textual means can we clarify the political geography of central Anatolia and Upper Mesopotamia in the Middle Bronze Age particularly with regard to the hierarchical organisation of city-states?
- What were the likely trade routes used by the donkey caravans starting from Aššur and heading towards the commercial settlements in Upper Mesopotamia and Anatolia? How well can we trace them archaeologically and what do they tell us about trading logistics and/or the political situation at the time?

1.4 Aims and Objectives

The first of the above research questions will be approached through the study and analysis of four specific examples of material culture that have often been invoked as tracers of long-distance exchange and/or political structures in the region: Syrian bottles, Khabur ware pottery, balance pan weights and seals with a view to understand the possible political and economic dynamics that caused their spread in Upper Mesopotamia and Central Anatolia. In particular, by using published and unpublished data and adopting a quantitative, spatial approach, I will assess (a) the diachronic distribution of those types of material culture in Upper Mesopotamia and central Anatolia during the early 2nd millennium, (b) the relationship between specific typologies and different archaeological

contexts and (c) how the spatial distribution of those objects is related to the Old Assyrian and other trade systems.

A second approach will focus on the spatial analysis of settlements distributed across two well-defined study areas: central Anatolia and the Khabur Triangle. This focus will be based on a range of spatial statistics techniques that formalise the description of the settlement size distribution and offer a quantitative measure for distinguishing more nucleated versus more dispersed settlement patterns. Then, I propose to apply a novel method to understand past settlement hierarchies and to predict which sites and areas would have become prominent in the Old Assyrian Period by using known archaeological sites as point data and historical information for calibration purposes.

A third and final approach will thereafter reconsider ancient routes from the Assyrian capital, Aššur, to the Anatolian city-states by analysing Old Assyrian texts and modelling possible paths or corridors of movement in order to detect which factors (e.g. environmental and/or socio-political) affected these long-distance interactions, and to explore their relationship to wider political geography. Below, I outline some of the technical methods by which I will provide computational models of such long distance interaction, but in addition, the material and textual evidence can be integrated in order to trace the network of private businesses of Assyrian merchants involved in the trade.

1.5 Choice of Data and Methodology

My research aims are to re-assess the Old-Assyrian trade network in Anatolia and Upper Mesopotamia during the early Middle Bronze Age by reconsidering the archaeology of the region and by using a variety of computational and spatial approaches (including GIS, remote sensing and spatial statistics). I will carefully blend material, textual and computational approaches to consider three specific sub-topics implied by the above research questions.

The use of written sources represents a particularly privileged tool for several reasons: the texts provide direct albeit not unproblematic information about political geography, the logistics of trade such as the distribution of way-stations *en route* and the presence of physical infrastructure for crossing the Anatolian rivers such as bridges, ferries and fords (Barjamovic 2011a: 19-37). The written sources come mainly from Kültepe's lower town, where level II has yielded c. 23,000 clay tablets and level Ib some 500 clay tablets.¹

¹ The two levels of Kültepe are dated according to the following chronology:

- Level II (c. 1970 – 1835 BC);

Smaller groups of texts have also been discovered at other sites located in Central Anatolia such as Boğazköy (72 texts), Achemhöyük, Kaman Kale-Höyük (1 tablet) and Alişar Höyük (63 tablets). Other written sources, contemporary with the archaeological layer IB of Kültepe, have further been found at the sites of Mari and Tell Leilan (500 texts).

The archaeological data come from sites that have been investigated over the past few decades by archaeological excavations and extensive surveys. For the purpose of this work, two different well-defined sub-regions within my research area have been chosen: the Khabur Triangle and central Anatolia. The choice of the two areas has been influenced by the limited number of regions where a sufficiently high intensity of archaeological excavations and surveys has been conducted, and by the need to provide a coherent framework for analysing settlement systems, given the various gaps in the survey record across Upper Mesopotamia and central Anatolia in the Middle Bronze Age (c. 2000-1600 BC). The two areas, however, should not be viewed as fully isolated from each other as testified by the long-distance commercial system set up by the Assyrians in the early second millennium, if not before. Via the study and the analysis of published archaeological surveys reports, I have also created a spatial database composed of 439 sites in the Khabur Triangle and 440 sites in central Anatolia during the Middle Bronze Age.²

A database of all published and some unpublished items has also been created for the Syrian bottles (n = 103), Khabur Ware (n = 2574), balance pan weights (n = 376), and seals (n = 2515). The published data for these object classes comes from all archaeological sites excavated in Upper Mesopotamia and central Anatolia with a known occupation during the Old Assyrian colony Period, while the only unpublished data used here relate to Khabur Ware stored in the British Museum and in the UCL Institute of Archaeology's collection (see Palmisano 2012). Wherever possible, each item of all four types of material culture (Khabur Ware, Syrian Bottles, balance pan weights and seals) has been recorded with respect to local stratigraphy, context (domestic/public buildings, palaces, temples, cultural areas, graves, etc.) and attributes (e.g. shapes, decoration motifs, styles, sizes, weight, etc.).

1.6 Book Outline

Chapter 2 will offer background on the political and economic structure of early complex societies in Western Asia and will introduce the landscape perspective on social, economic and political trajectories that is used thereafter. It will discuss a variety of theoretical frameworks about how archaeology, integrated with the study of written sources, can contribute to our understanding of the multifaceted landscapes and complex polities. Chapter 3 will then provide further necessary background information about my study area, and will also briefly discuss the chronology adopted in this book. My three main research questions are then addressed in three successive chapters dealing with the following themes: settlement size hierarchy, connectivity and material culture. In Chapter 4, I will revisit several classes of material culture that already have been proposed as markers of political structure and long-distance exchange in the region: Syrian Bottles, Khabur Ware pottery, balance pan weights, and seals. These will be assessed quantitatively where possible in order to detect specific spatial and functional patterns on local and regional scale and to tackle possible misunderstandings derived from applying traditional interpretative approaches to these classes of materials. Chapter 5 introduces methods for describing particular settlements patterns and addressing the extent to which geography, transportation, external contacts, and socio-economic factors make locations attractive for trade and settlement and why some archaeological sites become major urban centers in the Old Assyrian period in Upper Mesopotamia and Central Anatolia, while others do not. Chapter 6 offers an overview of the methodology used for reconstructing long-distance patterns of social, political and economic connectivity, as well as specific routes, via written sources, archaeological data and computational modeling.

Chapter 7 will discuss the results of the spatial analysis presented in Chapter 5, this time in relation to the Assyrian merchant trade routes in Chapter 6 and within the long-distance scenarios proposed from the results of the analysis of the material culture (Chapter 4). It will thereby look to answer in a more comprehensive way all the three research questions, offering at the same time grounds for a discussion of the wider implications of this book. Finally, chapter 8 will summarise the main outputs of the work, highlight some of its limitations and consider a range of possible future perspectives.

• Level Ib (c. 1835 – 1700 BC).

² For a complete list of published archaeological surveys carried out in Syria and Turkey see Wilkinson (2000: 223-224), and Glatz (2006: 539-541).
